

ASTERISK APPLIANCE™ 50

The Asterisk Appliance™ 50 (AA50) brings small to medium sized businesses a feature-rich, cost-effective, reliable telephony solution. The AA50 is a standalone, solution targeted for small to medium businesses (2-20 users), and remote branch offices of larger organizations (2-20 users per site). The Asterisk Appliance 50 also offers a hybrid solution alternative (a combination of VoIP applications using legacy telecom equipment) for enterprise customers who are not yet ready to migrate to a complete VoIP solution.

The AA50 features the commercially licensed, embedded Asterisk Business Edition™ software, as well as the AsteriskGUI™. The AsteriskGUI was created to make the configuration, management, and fine tuning of Asterisk easier by providing an easy to use graphical interface.

AA50 SUPPORT AND MAINTENANCE SUBSCRIPTION

Each Asterisk Appliance 50 comes with a Support and Maintenance Subscription. Subscriptions are offered as Silver (good), Gold (better) and Platinum (best) packages. The base Silver package provides ongoing software updates, extension of the product warranty, and unlimited e-mail support from Digium. A Gold subscription includes all benefits of Silver plus business hours* telephone support (up to 5 incidents), and Hardware Replacement in Advance. If your AA50 experiences a complete hardware failure, we will ship a new one to you while yours is on its way to us. Platinum expands on Gold by extending the hours to 24x7 and offering a total of 15 incidents.

Subscriptions are offered on an annual basis and begin when the subscription key is registered with Digium. AA50 customers will continue to receive software updates, support and the full AA50 warranty so long as their subscription is active.

Version 1.2 / 2 July 2009

Digium® is the creator, sponsor, and innovative force behind Asterisk®, the industry's first and world's most popular open source telephony software. Additionally, Digium provides a variety of VoIP communication solutions that fit the needs of small, medium, and large businesses. Digium's product lines include commercial business phone systems, as well as software, hardware, and other components needed to create powerful custom telephony solutions.

BUSINESS PHONE SYSTEMS

Digium's line of award winning Switchvox IP PBX phone systems are built on a strong foundation of our open source Asterisk software. Switchvox solutions are designed to be extraordinarily easy to use and provide features that most small and medium businesses had previously considered out of their reach.

Switchvox's web-aware unified communications capabilities are unique in an industry cluttered with old technology. Integration with web and back office applications turns your phone system into a powerful platform for employees' productivity and efficiency. Its web-based Switchboard provides an intuitive control panel to assist with call management in real time while unifying phone calls, faxes, e-mails, instant messaging, Google Maps, CRM systems and other web tools from an easy-to-use, centralized control panel.

We're able to offer these PBX systems with superior capabilities for a fraction of the cost of traditional vendors' products because the shift to an open source software foundation represents a dramatic leap forward in telephony technology.

CUSTOM TELEPHONY SOLUTIONS

Digium empowers users, developers and integrators to build custom telephony solutions by offering a variety of software, hardware, and third-party components. From a simple phone system, to a sophisticated telephony application, Digium makes it possible for the world to communicate in an infinite number of ways at a fraction of the cost of proprietary solutions.

At the heart of these offerings is Asterisk, the powerful open source telephony development toolkit. Asterisk is free software that turns an ordinary computer into a feature-rich voice communications platform. Its flexible architecture lets you configure it as an IP PBX, a voicemail server, IVR server, VoIP gateway, call recorder, automatic call distributor and virtually any other voice-enabled application you can imagine.

To support Asterisk-based solutions, Digium offers a full line of high quality analog and digital interface cards to connect your solution to the public telephone network. In addition, Digium offers add-on software components like Skype® For Asterisk, Fax For Asterisk, G.729 codec, and high performance echo cancellation (HPEC) to enhance your solution.
