

The Best Value in UC. Period.

*POWERFUL. ECONOMICAL. EASY TO USE.
Digium's phone system is the preferred choice.*

Who is Digium?

Digium is the developer and maintainer of Asterisk, the world's most widely adopted open source communications solution. Under development since 1999, Asterisk is open source software that turns an ordinary computer into a feature-rich voice communications server. Asterisk makes it simple to create and deploy a wide range of telephony applications and services. Considered to be disruptive technology because it introduced a more powerful, affordable phone system, Asterisk is a solution ideal for technically savvy developers and integrators.

Digium's Powerful UC Solution

In an effort to provide a similar solution accessible to everyone, Digium offers Switchvox — a full Unified Communications (UC) solution, built on the power of Asterisk. Switchvox is a business phone system specifically developed for small and mid-sized businesses and organizations that want the power of the open source Asterisk solution, but without the need for custom development skills for installation. The advanced features, ease-of-use, and simple out-of-the-box setup make Switchvox an ideal solution for organizations with limited technical staff.

A full-featured UC solution, fueled by the innovation of open source technology and open standards, Switchvox allows users to integrate their phone system with their existing networks and get all of the advanced features they need at a price they can afford. Most importantly, by using Asterisk open source software as the foundation for Switchvox, Digium is able to provide a communications system with superior capabilities for a fraction of the cost of proprietary systems.

What the Experts are Saying

"Digium designs its solutions for sophisticated functionality without complex ownership responsibilities. Switchvox is designed to be cost-effective over the lifecycle of the system, including ongoing support and maintenance costs as well as upgrades."

Frost & Sullivan, Industry Analysts

Discover more about Asterisk

The power behind the Switchvox UC Solution

Why Open Source?

By harnessing the power of collaboration, open source projects like Asterisk tap the creative skills of a global talent pool of developers, testers, and users. The result is software that truly fits your organization's requirements, can be customized to a degree impossible with proprietary systems, and offers a drastically lower total cost of ownership.

Who Uses Asterisk?

The Asterisk Community is made up of thousands of users, developers and integrators who have discovered the power of Asterisk and share in the success of the project. Asterisk readily scales from very small deployments to massive multi-server clusters. This unmatched flexibility has propelled it into virtually every business size, segment and industry with more than two million downloads last year. Open source is particularly appealing in budget-conscious environments including education, government agencies and not-for-profit organizations. Asterisk provides the flexibility to develop a customizable, affordable IP PBX.

What Is the Asterisk Community?

Community members from around the globe are constantly collaborating, sharing solutions, code and ideas that drive the continuous enhancement of Asterisk. Today, the Asterisk community includes more than 80,000 registered members including over 1,000 active code contributors — far more than a typical proprietary software company can dedicate to a project or product. In addition to numerous community contributors, Digium has dedicated a significant portion of its engineering resources to the open source project. Digium maintains the code for the project and ensures that it meets the highest engineering standards. This means that all Digium customers benefit from the development and quality assurance efforts provided by both the community and Digium corporate team members, making subsequent versions of Asterisk more stable.

Asterisk...

The World's Most Popular Open Source Communications Project

Digium is committed to continuing to provide the world's leading open source telephony project that allows you the freedom to build what you want.

What Can Asterisk Do?

- | | |
|---------------------|-----------------------|
| IVR | ACD |
| Automated Attendant | VoIP Gateway |
| Voicemail | Speech Applications |
| Unified Messaging | Unified Communication |
| Call Conferencing | IP PBX |
| Call Recording | |

Digium Customers are in Good Company

Millions of businesses already benefit from Asterisk solutions every day and have embraced the powerfully open communications that Digium delivers.

Switchvox UC Solution

THE SWITCHBOARD + DIGIUM PHONES: Real-time Call Control and More

All Switchvox SMB systems include a Switchboard. The Switchboard is an intuitive dashboard, consisting of moveable, modular panels that put you in control of your communications. The Switchboard is completely customizable for each extension, which allows each user to do their job better and faster. Users can easily drag-and-drop calls, update CRM records, view presence and caller profile information, and chat, all in one place with just a few clicks. It also seamlessly integrates with third-party web applications such as Salesforce, SugarCRM, Microsoft and Google Maps. When used in combination with Digium phones, customers will discover that Digium has moved the power of the Switchboard to the phone, putting advanced features like presence indication, searchable contact directory access, monitoring, recording and voicemail at a person's fingertips.

SWITCHVOX MOBILE: Communicate Where and How you Want

When you aren't communicating on your desktop phone, you can easily take your office on the road with Switchvox. With complete mobile integration, every user can take full advantage of Fixed Mobile Convergence (FMC). FMC is supported from any traditional or VoIP phone and each user can integrate up to five additional phones with their Switchvox extension, with no extra charge or license required. With the free iPhone, Blackberry, and Android applications for phones and tablets, you can truly take your office on the road. And, the Switchvox Mobile application allows for outbound calling from any user's extension and management of extension settings—all configured right in the smart phone.

EXTEND API: Customize your Switchvox

Many of the features in Switchvox can be accessed via the Switchvox Extend API. With Extend API, you can weave your phone system into your other business applications to create powerful customer service and productivity tools. The Extend API lets you build integrations and even enable business processes with Switchvox using common programming languages such as PERL and PHP. Now, you can trigger events and automatically change workflow by integrating other business applications with your UC phone system.

Why Choose Switchvox?

IT'S MORE THAN A PHONE SYSTEM.
Digium offers you a better way to communicate.

Digium's Switchvox UC solution offers everything businesses need to be more successful.

- Based on 100 users, Switchvox has helped customers:
 - Save more than 60% on initial investment
 - Lower TCO by \$80,000
 - Decrease monthly phone bills by 50%
 - Increase employee productivity, saving 40,000 hrs/yr
- Eliminate charges for moves, adds and changes
- Choose the Switchvox SMB system that fits your network (from under 30 users, and up to 400 users)
- Access Digium products worldwide via trusted network of authorized distributors and resellers
- Minimize maintenance costs
- Decrease IT network costs
- No extra charge or licensing is required! Easily connect tablets, mobile phones and home phones, so you can implement your Bring Your Own Device (BYOD) strategy.

Switchvox allows your users to work how they want to work.

Calculate your savings now.

Global Industry Recognition

Recognized globally, Digium's Switchvox UC is continually ranked as a winning SMB solution within the telecommunications industry — often beating competitors when it comes to innovation, features and value.

The Smarter Choice

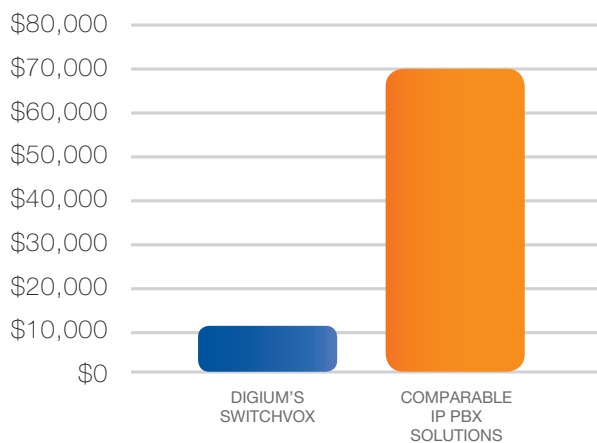

SWITCHVOX: BUILT TO WORK WITH YOUR NETWORK.
Designed to deliver the best value.

With all features included, you can save more than 60% on your initial investment and 80% on your total costs with Digium's Switchvox Unified Communications Solutions. See how comparable IP PBX platforms stack up against Digium's cost-effective, feature-rich solution.

COST OF CAPITAL

Save \$50,000 on Your Initial Investment*

* Digium pricing assumes 100 users. "Comparable IP-PBX Solutions" costs assumes 25 users, except for user licenses and voicemail.

"One of the great things about the Switchvox solution is that it's an all-in-one business phone system, so we didn't need to pay for expensive add-ons or additional configuration fees."

John Janetzki – IT Manager, Pioneer Electronics

"We reviewed our existing phone system and decided there had to be a more cost-effective and contemporary system on the market, which is why we researched the market and chose Digium's Switchvox."

Robert Ruigrok – CFO, CompNow

What is Unified Communications?

Unified Communications (UC) is a direct result of the convergence of communications and applications. Differing forms of communication have been developed, marketed and sold as separate individual applications. In some cases, they even had separate networks and devices. The convergence of all communications on IP networks and open-software platforms is enabling a new paradigm for UC, and is changing how individuals, groups and organizations communicate. Gartner defines UC products (equipment, software and services) as those that facilitate the use of multiple enterprise communication methods. This can include the control, management and integration of these methods. UC products integrate communication channels (media), networks and systems, as well as IT business applications and, in some cases, consumer applications and devices.

SMB buyers require simplicity and intuitive use in their UC solutions. Simplicity requirements extend through multiple stages (or touchpoints) of the UC acquisition — from initial consideration through ongoing maintenance and management of the UC environment. SMBs will favor working with providers (typically via their channel partners) that can demonstrate the solutions' ease of use early on in the sales cycle. Full-featured UC functionality can be positioned, but solutions that require complex integrations will be less favored than solutions that can easily be deployed with a minimal cutover time.

What The Experts are Saying

SMBs are expected to continue to retain a cautious approach to spending, and their UC decisions will be shaped not only by business process and communications improvements, but also by hard cost factors (like cost savings). This means some SMBs will take a more evolutionary approach to UC as they leverage existing investments in phones or communications infrastructure instead of migrating to UC suites in a single leap.
