Digium® and Asteria Solutions Group Extend Partnership

*Digium Premier Software Partner creates telephony software and
custom solutions based on open source Asterisk® platform*

HUNTSVILLE, Ala.—January 12, 2009—Digium®, Inc., the Asterisk® Company, and Asteria Solutions Group, a developer of solutions based on the open source Asterisk telephony platform, today announced the renewal of the two companies' partnership. Asteria has been a Digium Premier Software Partner since 2007 and has contributed to Asterisk since Asteria's founding in 2004. The company provides software that works with Asterisk, including OmegaDial, the Web-based autodialer for high-volume call campaigns, and also draws upon its deep knowledge of Asterisk to create custom telephony solutions to meet unique business requirements.

Digium offers a wide range of Asterisk-based software, appliances and hardware that enable service providers, resellers, integrators and businesses to quickly implement turnkey telephony systems or, for customers who want a tailored solution, to design specialized voice over IP (VoIP) systems.

In addition to the OmegaDial autodialer, Asteria provides the Assist interface for call center agents and INsight queue management system. Asteria's software, combined with its consultants' knowledge of Asterisk and telephony, Linux, customer relationship management (CRM) applications, Web development and database technology, allow the company to create custom telephony solutions for organizations of all sizes.

"Our five-year relationship with Digium has been very rewarding," said David Mattern, vice president of business development for Asteria. "Renewing as a Premier Software Partner demonstrates our commitment to Digium and the Asterisk community. We look forward to continuing this synergistic relationship."

"Our strong relationship with Asteria is based on the company's demonstrated expertise in creating software applications that build on the Asterisk platform," said Jim Webster, director of technology partnerships at Digium. "As more companies look for cost-effective phone systems that integrate with other business software, we think that demand for the type of products and services provided by Asteria will continue to rise."

Visit Asteria and Digium at Digium|Asterisk World at ITEXPO, February 2-4, 2009, at the Miami Beach Convention Center.

About Asteria
Founded in 2004, Asteria Solutions Group began as a technical services and support provider for Asterisk®-based PBXs. Leveraging extensive Asterisk® and traditional telephony experience, Asteria has expanded its offerings to include commercial software products for call centers, broadcast messaging, custom notification systems and PBXs. Additional information on Asteria Solutions Group and their products can be found at www.asteriasgi.com.

About Digium
Digium®, Inc., the Asterisk® Company, created, owns and is the innovative force behind Asterisk, the most widely used open source telephony software. Since its founding in 1999, Digium has become the open source alternative to proprietary communication providers, with offerings that cost as much as 80 percent less. Digium offers Asterisk software free to the open source community and offers Asterisk Business Edition and Switchvox IP PBX software to power a broad family of products for small, medium and large businesses. The company's product line includes a wide range of hardware to enable resellers and customers to implement turnkey solutions or to design their own voice over IP (VoIP) systems. More information is available at www.digium.com.
